# Murder Mystery Prompt

Vebashini Naidoo (@Vebash)

2019/10/13 (updated: 2019-10-13)

Whodunnit??

A crime has taken place and the detective needs your help. The detective gave you the crime scene report, but you somehow lost it. You vaguely remember that the crime was a murder that occurred sometime on Jan.15, 2018 and that it took place in SQL City.

All the clues to this mystery are buried in a huge database, and you need to use your R skills to navigate through this vast network of information. Your first step to solving the mystery is to retrieve the corresponding crime scene report from the police department's database. Take a look at the cheatsheet to learn how to do this using the tidyverse tools! From there, you can use your R skills to find the murderer.

The crime may be solved with other tools besides tidy tools as well, please feel free to use the dataset as a learning tool for other packages in R or base R itself if that is your wish.

The cheatsheet is for tidyverse tools for now as a start, but since I am learning myself I may expand this to include data.table etc. in future.

Have fun!
